

OFFICE OF CURRICULUM, INSTRUCTION, & PROFESSIONAL DEVELOPMENT

**MIDDLE SCHOOL COURSE OUTLINE**

(Revised May 2011)

<b>Department</b>	Science	<b>Course Code</b>	4100
<b>Course Title</b>	Science 6		
<b>Abbreviation</b>	Science 6	<b>Grade Level</b>	6
<b>Course Length</b>	1 year	<b>Prerequisites</b>	None

**COURSE DESCRIPTION:**

Sixth grade science is a standards and laboratory based program. Students should spend approximately forty percent (40%) of their class time on hands-on activities. Introductory principles of earth science will be explored in detail, with some related topics from physical and life sciences included. Constructivist methods of teaching are employed to ensure the best possible comprehension and retention of science concepts. Science activities will be based on the California Science Standards as delineated in the California Science Framework and will utilize the skills and techniques outlined in the Investigation and Experimentation Strand of the Content Standards.

**GOALS:** (Student needs this course is intended to meet)

- Students will learn all of the California State Standards for 6<sup>th</sup> Grade Science, which emphasize Earth sciences. The use of well-designed, memorable experiences and the application of scientific knowledge and methodology are essential in helping students achieve appropriate comprehension of the content.
- Students will improve their ability to learn independently by drawing generalizations from science related articles, books, graphs, charts, and diagrams. Regular opportunities are provided for students to clearly communicate their understanding through oral and written explanations of science concepts.
- Students will study the applications of science in everyday life to inspire them to consider pursuing advanced studies in science and explore the wide variety of related career choices available.

# CONTEXT: CONTENT SCOPE AND SEQUENCE

	Physical Sciences	Earth Sciences	Life Sciences
<b>6th</b>	Density (Qualitative) ----- (CA 8) Energy Temperature vs. Heat Heat Transfer	Earth's Layers Plate Tectonics Mountain Building Earthquakes, Faults, and Epicenters Volcanoes California Geology Mechanical & Chemical Weathering Minerals ----- (LB) Rock Cycle (Igneous, Metamorphic, and Sedimentary Rocks) ----- (LB) Sun's Effect on Weather Convections Solar Energy Atmospheric Conditions Natural Resources Stratigraphy: Fossil Locations Rock (CA 7) Geol. Timeline of Earth's History ----(CA 7) Formation of Fossils -----(CA 7) Methods of Dating Earth's History --- (CA 7)	Food Chains / Food Webs Ecosystems Human Impacts on Ecosystems ----- (LB)
			Six Designated Lessons from Project ALERT Health Curriculum
<b>7th</b>			Cell Similarities & Differentiation Function of Cell Structures Energy at the Cellular Level Photosynthesis / Respiration Mitosis Genetics DNA → RNA → Protein ----- (LB) Sexual / Asexual Reproduction Meiosis ----- (LB) DNA, Genes, & Alleles Dominant & Recessive Traits Theory of Evolution Natural Selection Body Systems Taxonomic Keys ----- (LB) Kingdoms & Major Phyla ----- (LB)
<b>8th</b>	Observing and Defining Motion Forces and their Effects Gravity's Large Scale Effects Basic Atomic Theory Periodic Table as a Tool Metals, Non-metals, Inert Gases Electrons beyond the Bohr Model Ions and Isotopes Physical & Chemical Properties Element vs. Compound Properties Chemical Bonding Atoms and Ions Forming Solids Phases and Molecular Motion Chemical Formulas Chemical Equations & Conservation of Matter Exothermic vs. Endothermic Acids, Bases, and pH Density & Buoyancy Sound and Light Energy ----- (CA 7)	Galaxies and Stars Life Cycles of Stars (Nebular Theory, Novas, etc.) Distances in Astronomy Light Sources and Reflectors in the Universe Cosmology (Universe Origin) ----- (LB) Solar System	Simple Machines and the Human Body -----(CA 7) Blood Pressure and Heart Valves---(CA 7) Organic Chem. / Biochem.
			Three Designated Lessons from Project ALERT Health Curriculum

Notes regarding non-aligned content:

- (LB) => Long Beach specific content; not found in CA Science Content Standards
- (CA 7) => 7<sup>th</sup> grade content which has been moved to 6<sup>th</sup> or 8<sup>th</sup> grade to accommodate reduced science instruction in 7<sup>th</sup> grade
- (CA 8) => 8<sup>th</sup> grade content which should be presented qualitatively in 6<sup>th</sup> grade to help explain convections and other Earth science related content

## CONTEXT: SKILLS SCOPE AND SEQUENCE

### Investigation and Experimentation:

Scientific progress is made by asking meaningful questions and conducting careful investigations. As a basis for understanding this concept and addressing the content in the other three strands, students should develop their own questions and perform investigations. Students will:

---

### 6th

- 7a. Develop a hypothesis.
- b. Select and use appropriate tools and technology (including calculators, computers, balances, spring scales, microscopes, and binoculars) to perform tests, collect data, and display data.
- c. Construct appropriate graphs from data and develop qualitative statements about the relationships between variables.
- d. Communicate the steps and results from an investigation in written reports and oral presentations.
- e. Recognize whether evidence is consistent with a proposed explanation.
- f. Read a topographic map and a geologic map for evidence provided on the maps and construct and interpret a simple scale map.
- g. Interpret events by sequence and time from natural phenomena (e.g., the relative ages of rocks and intrusions).
- h. Identify changes in natural phenomena over time without manipulating the phenomena (e.g., a tree limb, a grove of trees, a stream, a hillslope).

---

### 7th

- 7a. Select and use appropriate tools and technology (including calculators, computers, balances, spring scales, microscopes, and binoculars) to perform tests, collect data, and display data.
- b. Utilize a variety of print and electronic resources (including the World Wide Web) to collect information as evidence as part of a research project.
- c. Communicate the logical connection among hypothesis, science concepts, tests conducted, data collected, and conclusions drawn from the scientific evidence.
- d. Construct scale models, maps and appropriately labeled diagrams to communicate scientific knowledge (e.g., motion of Earth's plates and cell structure).
- e. Communicate the steps and results from an investigation in written reports and verbal presentations.

---

### 8th

- 9a. Plan and conduct a scientific investigation to test a hypothesis.
- b. Evaluate the accuracy and reproducibility of data.
- c. Distinguish between variable and controlled parameters in a test.
- d. Recognize the slope of the linear graph as the constant in the relationship  $y=kx$  and apply this to interpret graphs constructed from data.
- e. Construct appropriate graphs from data and develop quantitative statements about the relationships between variables.
- f. Apply simple mathematical relationships to determine one quantity given the other two (including speed = distance/time, density = mass/volume, force = pressure x area, volume=area x height).
- g. Distinguish between linear and non-linear relationships on a graph of data.

## CA CONTENT STANDARDS

### *Grade 6 Focus On Earth Science:*

#### Plate Tectonics and Earth's Structure

1. Plate tectonics accounts for important features of Earth's surface and major geologic events. As a basis for understanding this concept, students know ...
  - a. the fit of the continents, location of earthquakes, volcanoes, and midocean ridges, and the distribution of fossils, rock types, and ancient climatic zones provide evidence for plate tectonics.
  - b. the solid Earth is layered with cold, brittle lithosphere; hot, convecting mantle; and dense, metallic core.
  - c. lithospheric plates that are the size of continents and oceans move at rates of centimeters per year in response to movements in the mantle.
  - d. earthquakes are sudden motions along breaks in the crust called faults, and volcanoes/fissures are locations where magma reaches the surface.
  - e. major geologic events, such as earthquakes, volcanic eruptions, and mountain building result from plate motions.
  - f. how to explain major features of California geology in terms of plate tectonics (including mountains, faults, volcanoes).
  - g. how to determine the epicenter of an earthquake and that the effects of an earthquake vary with its size, distance from the epicenter, local geology, and the type of construction involved.

#### Shaping Earth's Surface

2. Topography is reshaped by the weathering of rock and soil and by the transportation and deposition of sediment. As a basis for understanding this concept, students know ...
  - a. water running downhill is the dominant process in shaping the landscape, including California's landscape.
  - b. rivers and streams are dynamic systems that erode and transport sediment, change course, and flood their banks in natural and recurring patterns.
  - c. beaches are dynamic systems in which sand is supplied by rivers and moved along the coast by wave action.
  - d. earthquakes, volcanic eruptions, landslides, and floods change human and wildlife habitats.

#### Heat (Thermal Energy) (Physical Science)

3. Heat moves in a predictable flow from warmer objects to cooler objects until all the objects are at the same temperature. As a basis for understanding this concept, students know ...
  - a. energy can be carried from one place to another by heat flow, or by waves including water waves, light and sound, or by moving objects.
  - b. when fuel is consumed, most of the energy released becomes heat energy.
  - c. heat flows in solids by conduction (which involves no flow of matter) and in fluids by conduction and also by convection (which involves flow of matter).
  - d. heat energy is also transferred between objects by radiation; radiation can travel through space.

#### Energy in the Earth System

4. Many phenomena on Earth's surface are affected by the transfer of energy through radiation and convection currents. As a basis for understanding this concept, students know ...
  - a. the sun is the major source of energy for phenomena on the Earth's surface, powering winds, ocean currents, and the water cycle.
  - b. solar energy reaches Earth through radiation, mostly in the form of visible light.
  - c. heat from Earth's interior reaches the surface primarily through convection.
  - d. convection currents distribute heat in the atmosphere and oceans.
  - e. differences in pressure, heat, air movement, and humidity result in changes of weather.

Ecology (Life Science)

5. Organisms in ecosystems exchange energy and nutrients among themselves and with the environment. As a basis for understanding this concept, students know ...
- energy entering ecosystems as sunlight is transferred by producers into chemical energy through photosynthesis, and then from organism to organism in food webs.
  - over time, matter is transferred from one organism to others in the food web, and between organisms and the physical environment. [LS10]
  - populations of organisms can be categorized by the functions they serve in an ecosystem. [LS10]
  - different kinds of organisms may play similar ecological roles in similar biomes.
  - the number and types of organisms an ecosystem can support depends on the resources available and abiotic factors, such as quantity of light and water, range of temperatures, and soil composition. [LS10]

Resources

6. Sources of energy and materials differ in amounts, distribution, usefulness, and the time required for their formation. As a basis for understanding this concept, students know ...
- the utility of energy sources is determined by factors that are involved in converting these sources to useful forms and the consequences of the conversion process.
  - different natural energy and material resources, including air, soil, rocks, minerals, petroleum, fresh water, wildlife, and forests, and classify them as renewable or nonrenewable.
  - natural origin of the materials used to make common objects.

Earth and Life History (Earth Science) (CA 7<sup>th</sup> Grade Standards)

- 7-4. Evidence from rocks allows us to understand the evolution of life on Earth. As the basis for understanding this concept, students know ...
- Earth processes today are similar to those that occurred in the past and slow geologic processes have large cumulative effects over long periods of time.
  - the history of life on Earth has been disrupted by major catastrophic events, such as major volcanic eruptions or the impacts of asteroids.
  - that the rock cycle includes the formation of new sediment and rocks and that rocks are often found in layers, with the oldest generally on the bottom.
  - that evidence from geologic layers and radioactive dating indicates Earth is approximately 4.6 billion years old and that life on this planet has existed for more than 3 billion years.
  - fossils provide evidence of how life and environmental conditions have changed
  - how movements of the Earth's continental and oceanic plates through time, with associated changes in climate and geographical connections, have affected the past and present distribution of organisms.
  - how to explain significant developments and extinctions of plant and animal life on the geologic time scale.

Investigation & Experimentation

7. Scientific progress is made by asking meaningful questions and conducting careful investigations. As a basis for understanding this concept and addressing the content in the other three strands, students should develop their own questions and perform investigations. Students will ...
- develop a hypothesis.
  - select and use appropriate tools and technology (including calculators, computers, balances, spring scales, microscopes, and binoculars) to perform tests, collect data, and display data.
  - construct appropriate graphs from data and develop qualitative statements about the relationships between variables. [LS10]
  - communicate the steps and results from an investigation in written reports and verbal presentations.
  - recognize whether evidence is consistent with a proposed explanation. [LS10]
  - read a topographic map and a geologic map for evidence provided on the maps, and construct and interpret a simple scale map.
  - interpret events by sequence and time from natural phenomena (e.g., relative ages of rocks and intrusions).
  - identify changes in natural phenomena over time without manipulating the phenomena (e.g., a tree limb, a grove of trees, a stream, a hillslope).

**DISTRICT PERFORMANCE STANDARDS:**

The Long Beach Unified School District has common assessments and assignments that are required for sixth grade science. The Performance Standard Criteria are shown in the table below. The objective is to have all students achieve at or above the Proficient Level and receive a C or better in the course. Performance level is determined by the average of the assessments or assignments.

**Science Performance Standard Criteria**

	<b>Not Proficient</b>	<b>Partial Proficient</b>	<b>Proficient</b>	<b>Advanced Proficient</b>
Graded Student Work	Average is a 1 or less than 60%	Average is a 2 or 60% - 69%	Average is a 3 or 70% - 84%	Average is a 4 or 85% - 100%
Standards-Based Classroom Assessments	Less than 60%	60% - 69%	70% - 84%	85% - 100%
Written Response / Lab Report / OES (6 point scale)	1-2	3	4	5-6
Written Response / Lab Report / OES (4 point scale)	1	2	3	4
End-Of-Course Exam	Less than 45%	45% - 59%	60% - 84%	85% - 100%

## OUTLINE OF CONTENT AND RECOMMENDED TIME ALLOTMENT:

Time allocations are only suggestions and may be adjusted to suit school site curriculum plans and student needs. Content sequencing is established to align with quarterly district assessments. Adjusting the sequencing can only be done within the established quarters.

Health education from Project ALERT lessons 1-6 are optional.  
Materials and training are available through the Health Curriculum Office (Ext 2967).

## APPLICATION OF COURSE CONTENT: *Career Connections*

**Related Major Skills & Characteristics** – objective observation, careful measurement, curiosity, problem solving, organizational skills, numerical reasoning, ability to analyze & interpret data, critical thinking, reading comprehension, concise and accurate communication skills, computer literacy, logical thinking, team skills, testing skills, practical safety awareness, evidence evaluating

**Related Careers** – Students who continue in the sciences can prepare for the following careers:

Aeronautical Engineer ( <i>Rocket Scientist</i> )	Chemical Engineer	Mining Geologist	Physiologist
Agricultural Ecologist	Electrical Engineer	National Park Ranger	Professor
Analytical Chemist	Energy	Neurobiologist	Quality Control Specialist
Aquatic Microbial Ecologist	Fire Fighter	Nuclear Physicist	Radiologist
Astronomer	Geologist	Nurse	Refrigeration Technician
Automotive Engineer	Geneticist	Paleontologist	Science Fiction Writer
Biochemist	Immunologist	Pathologist	Seismologist
Biologist	Marine Biologist	Pediatrician	Teacher
Biotechnologist	Materials Scientist	Petroleum Geologist	Technical Editor
Botanist	Medical Researcher	Pharmacist	Veterinarian
Cell Biologist	Meteorologist	Physician	Virologist
	Microbiologist	Physicist	Wildlife Ecologist

## METHODS:

**Lesson Design & Delivery:** Teachers will incorporate these components of lesson design during direct instruction and inquiry activities. The order of components is flexible, depending on the teacher’s vision for the individual lesson. For instance, the objective and purpose, while present in the teacher’s lesson plan, are not made known to the students at the beginning of an inquiry lesson.

<p><b>Essential Elements of Effective Instruction Model for Lesson Design Using Task Analysis</b></p>	<p>Anticipatory Set Objective Standard Reference Purpose Input Modeling Check for Understanding Guided Practice Closure Independent Practice</p>
---	--

Some components may occur once in a lesson, but others will recur many times. Checking for understanding occurs continually; input, modeling, guided practice and closure may occur several times. There may even be more than one anticipatory set when more than one content piece is introduced.

**Active Participation:** Teachers will incorporate the principles of active participation and specific strategies to ensure consistent, simultaneous involvement of the minds of all learners in the classroom. Teachers should include both covert and overt active participation strategies, incorporating cooperative learning structures and brain research. Some of the possible active participation strategies include:

COVERT	OVERT (Oral)	OVERT (Written)	OVERT (Gestures)
<ul style="list-style-type: none"> <li>• Recall</li> <li>• Imagine</li> <li>• Observe</li> <li>• Consider</li> </ul>	<ul style="list-style-type: none"> <li>• Pair/Share</li> <li>• Idea Wave</li> <li>• Choral Response</li> <li>• Give One, Get One</li> <li>• Socratic Seminar</li> <li>• Cooperative Discussion Groups (i.e. Talking Chips, Gambit Chips)</li> </ul>	<ul style="list-style-type: none"> <li>• Restate in Journals / Notes</li> <li>• Response Boards</li> <li>• Graphic Organizers</li> <li>• Folded Paper</li> <li>• Ticket Out of Class</li> </ul>	<ul style="list-style-type: none"> <li>• Hand Signals</li> <li>• Model with Manipulatives</li> <li>• Stand up/ Sit down</li> <li>• Point to Examples</li> </ul>

**Baldrige Quality Tools:** Students can become more positively involved in their education through goal setting, self-assessment, and data tracking and analysis by making use of the following strategies:

BALDRIDGE TOOL	PURPOSES
<b>Affinity Diagram</b>	– finding consensus, organizing complex information
<b>Flowchart</b>	– describing a process, planning a project, identifying problem steps in a process
<b>Force Field Diagram</b>	– identifying obstacles, finding causes and solutions to problems
<b>Issues / Ideas Bin</b>	– handling individual questions/requests without stopping a group activity, providing anonymous input, obtaining diverse input in specific areas.
<b>Data Folder</b>	– tracking goals and actual results
<b>Plus / Delta</b>	– tracking improvement efforts, identifying opportunities for change, finding out what's working and what's not working in a process, procedure, activity, etc.
<b>Class Data Graphs</b>	– displaying trends for goal setting

Learning styles and learning challenges of your students may be addressed by implementing combinations of the following:

#### **Reading Strategies in Science**

- Learning Logs
- Pre-teaching
- Vocabulary
- Pre-reading
- Text Structures
- Trail Markers
- Reciprocal Teaching
- Functional Text

#### **SDAIE Strategies for English Learners**

- Tapping/Building Prior Knowledge (Graphic Organizers, Schema)
- Grouping Strategies
- Multiple Intelligences
- Adapt the Text
- Interactive Learning (Manipulatives, Visuals)
- Acquisition Levels
- Language Sensitivity
- Lower the Affective Filter (including Processing Time)
- Home/School Connection (including Cultural Aspects)

#### **Differentiation for Advanced Learners**

- Curriculum Compacting
- Tiered Assignments
- Flexible Grouping
- Acceleration
- Depth and Complexity
- Independent Study

#### **Significant, Proven Science Strategies for ALL Science Students**

- |   |   |   |
|---|---|---|
| <input type="checkbox"/> Hands-On Labs              | <input type="checkbox"/> Short/Long-term projects | <input type="checkbox"/> Current Events |
| <input type="checkbox"/> Inquiry Activities         | <input type="checkbox"/> Essential Questions      | <input type="checkbox"/> Peer Teaching  |
| <input type="checkbox"/> Written/Oral Presentations | <input type="checkbox"/> Summarization            | <input type="checkbox"/> Guest Speakers |

*Please note that these strategies often overlap and should not be limited to specifically defined courses or student populations.*

## **MATERIALS:**

Basic Textbook and Supplementary Materials: Focus on Earth Science,  
Glencoe © 2007

eguidance.com web site for exploring careers

safety equipment: goggles, latex gloves, fire extinguisher

glassware: flasks, beakers, test tubes, etc.

measuring devices: triple beam balance, rulers, volumetric containers

chemical reagents

microscopes, microviewers, hand lenses, dissection equipment

appropriate technology

- ❖ Many items are available through Science/Math Resource Center (SMRC).

**RESOURCES:***Documents*

- ❑ Science Framework: ..... <http://www.cde.ca.gov/re/pn/fd/documents/scienceframework.pdf>  
[or find it posted in sections at the LBUSD Science Office website]
- ❑ CST / NCLB Test Blueprints: ..... <http://www.cde.ca.gov/ta/tg/sr/blueprints.asp>
- ❑ CST Reference Sheets: ..... <http://www.cde.ca.gov/ta/tg/sr/cstsciref.asp>
- ❑ CST Released Test Questions ..... <http://www.cde.ca.gov/ta/tg/sr/css05rtq.asp>
- ❑ National Science Standards: ..... <http://www.nap.edu/readingroom/books/nse/html/>
- ❑ Science Safety Handbook for CA Public Schools (1999)  
can be ordered from the CDE at ..... <http://www.cde.ca.gov/re/pn/rc/>
- ❑ LBUSD Approved Chemicals List, Chemical Hygiene Plan, and Science Fair Resources:  
[http://www.lbusd.k12.ca.us/Main\\_Offices/Curriculum/Areas/Science/teacher\\_resources.cfm](http://www.lbusd.k12.ca.us/Main_Offices/Curriculum/Areas/Science/teacher_resources.cfm)

*District Offices*

- ❑ Science Curriculum Office (562) 997-8000 (ext. 2963)
  - K-12 science standards, curriculum, professional development, science fair
- ❑ Science / Math Resource Center (SMRC) (562) 997-8000 (ext. 2964)
  - hands-on materials, consumable material orders, alternative standards-based curriculum packets
- ❑ Instructional Materials Workshop (IMW) (562) 997-8000 (ext. 2965)
  - standards-based instructional materials
  - content integrated instructional materials
  - monthly theme-based literacy supplements for science
  - wood shop / lumber room
  - copying, enlarging, and laminating
- ❑ Office of Multimedia Services (OMS) (562) 997-8000 (ext. 7145)
  - videos for check out to fit the curriculum (see your librarian for current catalogs)
  - district TV channels programming
- ❑ PALMS Office Program Assistance for Language Minority Students (562) 997-8000 (ext. 8031)
  - technical assistance and professional development for English Language Development (ELD) and Specially Designed Academic Instruction In English (SDAIE)
  - assistance in the implementation and maintenance of programs addressing the needs of English Language Learners (ELLs)
- ❑ Health Curriculum Office (562) 997-8000 (ext. 2967)
  - curriculum and training for mandated health content

**EVALUATION:** Student achievement in this course will be measured using multiple assessment tools. Assessments will be used for diagnosing student understanding before instruction, monitoring student learning during instruction, and evaluating student understanding after instruction.

**SUGGESTED EVALUATION TOOLS:**

Source	Diagnose	Monitor	Evaluate
<b>District Developed Assessments</b>	Grade Level Pretest	Constructed Response Performance Task	End of Course Exam Constructed Response
<b>Glencoe Science: Focus on Earth Science</b>	Reading Essentials: Before You Read Launch Labs New Vocabulary	Reading Check questions Science Notebook, "Summarize It" Lesson Review: Summarize, Using Vocabulary, Understanding Main Ideas, Applying Science Reading Essentials: Think it Over, Reading Check, Picture This Applying Math Foldables Active Folders Mini Lab and Lab Standards Review	Standards Assessment Performance Assessment Sci Activities for Adv. Learners Chapter & Unit Tests  Rubric Scored Projects, Labs, and Writings
<b>Teacher Developed Assessments</b>	Accessing Prior Knowledge Activities Pre-quiz Pre-Test Vocab. Knowledge Rating	Warm-Up Quiz Proving Behavior Lab	Open-ended Prompts Chapter / Unit Test Practicum Semester Final Exam

**SUGGESTED GRADE WEIGHTING:**  
(with some possible examples)

- |   |                          |
|---|--------------------------|
| <b>1. Assessment</b>  | <b>~30%</b>              |
| <ul style="list-style-type: none"> <li>o objective tests including comprehensive finals</li> <li>o performance tasks (rubric scored)</li> <li>o open-ended questions (rubric scored)</li> <li>o portfolios</li> <li>o student self-evaluations</li> </ul> |                          |
| <b>2. Homework</b>  | <b>not more than 10%</b> |
| <ul style="list-style-type: none"> <li>o discovery assignments</li> <li>o assignments reinforcing class lesson</li> <li>o essays</li> <li>o organization</li> <li>o research</li> </ul>   |                          |
| <b>3. Labs</b>  | <b>~20%</b>              |
| <ul style="list-style-type: none"> <li>o lab reports</li> <li>o active participation</li> </ul>   |                          |
| <b>4. Projects</b>  | <b>~20%</b>              |
| <ul style="list-style-type: none"> <li>o science fair projects</li> <li>o research-based reports and projects</li> </ul>  |                          |
| <b>5. Classwork</b>   | <b>~20%</b>              |
| <ul style="list-style-type: none"> <li>o note taking skills</li> <li>o organization skills</li> <li>o oral presentations</li> <li>o individual and group projects and assessments</li> </ul>  |                          |

<b>STANDARD GRADING SCALE:</b>		
Advanced Proficient	A	90 – 100%
	B	80 – 89%
Proficient	C	70 – 79%
Partial Proficient	D	60 – 69%
Not Proficient	F	0 – 59%
